Subject: Quarterly Site Status Report Submittal

Dear Mr. Bento:

On behalf of Atlantic Richfield Company, Delta Environmental Consultants, Inc. is submitting the enclosed Quarterly Site Status Report for the First Quarter 2005. The enclosed quarterly report was prepared for the following ARCO Facility:

ARCO Facility No.

206

Location

302 West First Street, Santa Ana

If you have any questions regarding this project, please contact the undersigned at (949) 360-5795.

Sincerely,

**DELTA ENVIRONMENTAL CONSULTANTS, INC.**

A handwritten signature in black ink that reads "Aaron Baird".

Aaron Baird  
Project Manager

Enclosure: Atlantic Richfield Company Quarterly Site Status Report

cc: Mr. Darrell Fah, Atlantic Richfield Company, La Palma, California  
Ms. Valerie Jahn-Bull, CRWQB-Santa Ana Region, Riverside, California

A member of:

**ATLANTIC RICHFIELD COMPANY QUARTERLY SITE STATUS REPORT**  
**FIRST QUARTER 2005**  
**APRIL 26, 2005**

ARCO Facility No.: 206 Address: 302 West First Street, Santa Ana, California  
Atlantic Richfield Co. Environmental Manager / Phone No.: Darrell Fah / (714) 378-5105  
Consulting Co. / Contact Person / Phone No.: Delta Environmental / Aaron Baird / (949) 360-5795  
Primary Agency / Contact Person / Regulatory ID No.: Santa Ana Fire Department (SAFD) / Jay Bento  
Other Agencies to Receive Copies: California Regional Water Quality Control Board – Santa Ana / Valerie Jahn-Bull

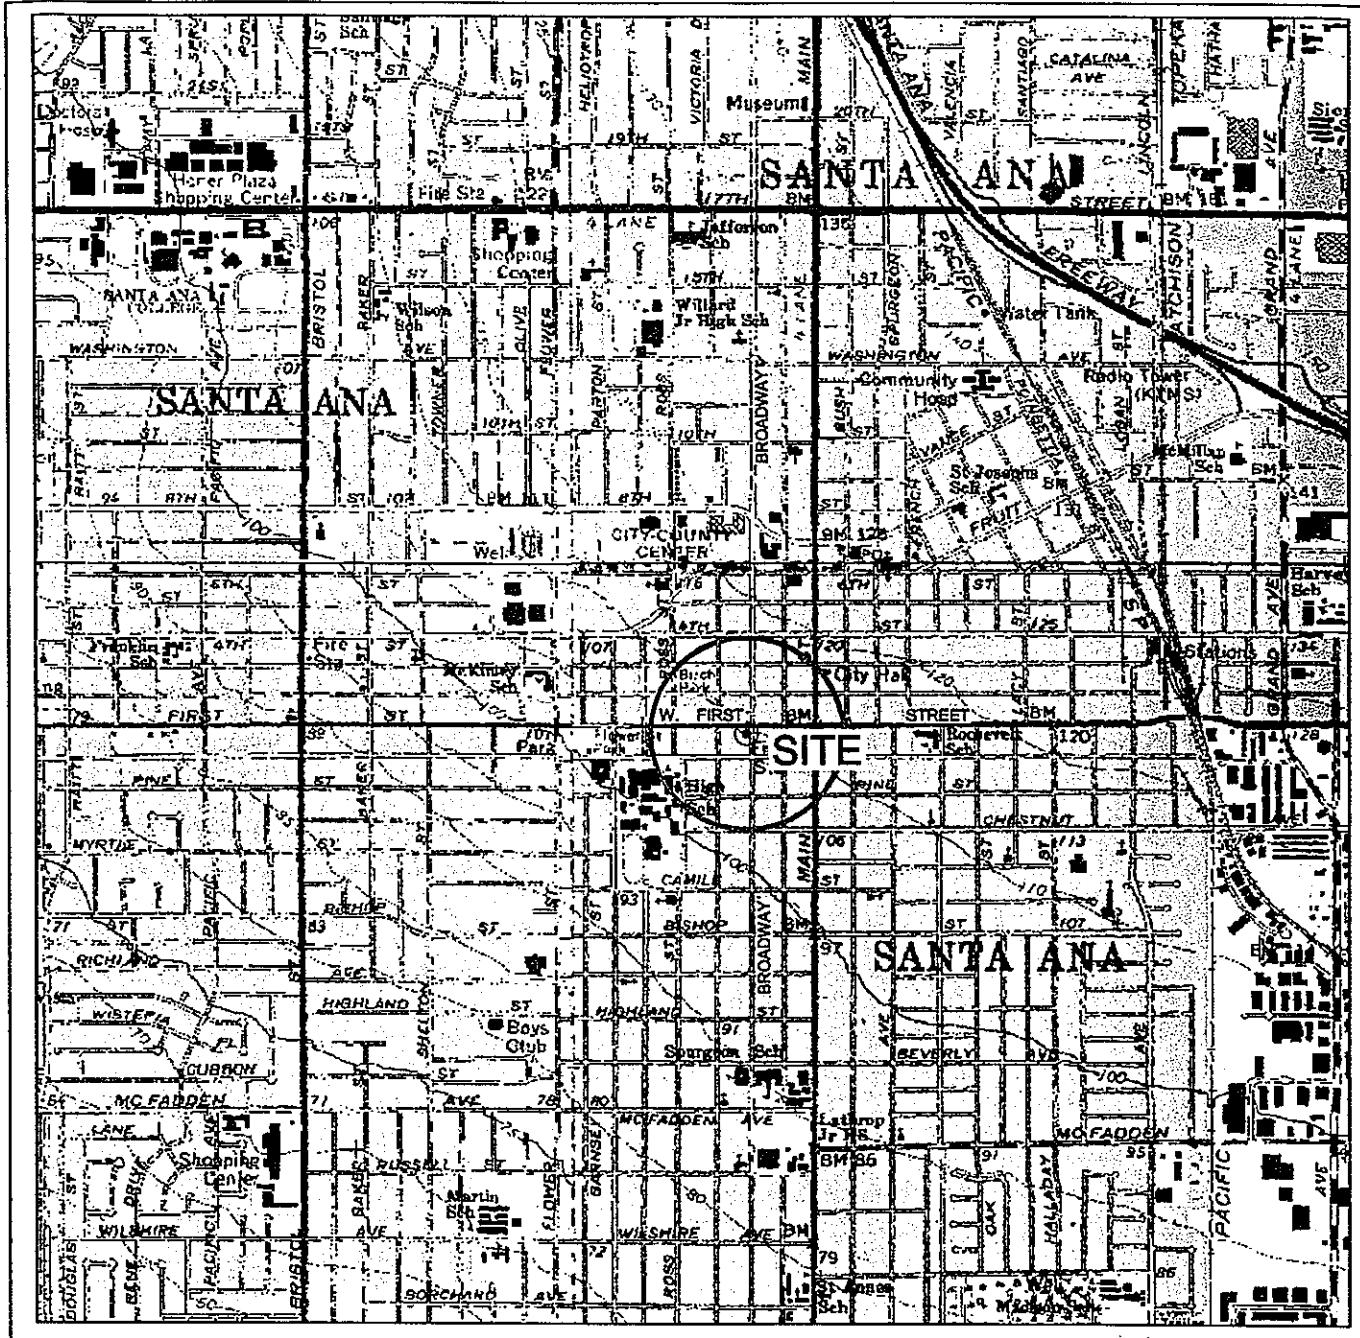

**WORK PERFORMED THIS QUARTER (First - 2005):**

1. During the first quarter 2005, the soil vapor extraction (SVE) system continued to be cycled on a monthly basis. Following one month of operation, the SVE system was turned off on January 3, 2005, and remained off for approximately one month. The SVE system was restarted on February 1, 2005 and operated continuously to February 28, 2005, when the system was turned off. A summary of system operational and performance data is included as Attachment A.
2. Submitted the fourth quarter 2004 *Quarterly Site Status Report*, dated January 28, 2004, to the SAFD.
3. Submitted the *Work Plan for Confirmation Soil Borings*, dated February 4, 2005, to the SAFD.
4. Received letter from the SAFD dated March 30, 2005, which stated that the SAFD does not approve the *Work Plan for Confirmation Soil Borings*.

**WORK PROPOSED FOR THE NEXT QUARTER (Second - 2005):**

1. Submit quarterly site status report to the SAFD.
2. Submit addendum to the *Work Plan for Confirmation Soil Borings*.
3. Upon receiving approval of the addendum to *Work Plan for Confirmation Soil Borings* from the SAFD, acquire permits and conduct confirmation soil boring activities.
4. Prepare report summarizing the results of the confirmation soil boring activities.

Current Phase of Project: Remediation / Closure  
Frequency of SVE System Sampling: Monthly (when operational)  
Frequency of SVE System Monitoring: Weekly (when operational)  
Bulk Soil Removed to Date: 3.86 cubic yards  
Hydrocarbons Recovered by SVE to Date: 17,838 pounds (1/3/05)  
Permits for Discharge (No.): Site Specific SCAQMD Permit No. F44491  
Water Wells or Surface Waters within 2000': Production wells SA-13 (scr 303-924'), SA-29 (scr 450-1050'), and SA-33 (scr 425-935') appx 1,800' west  
Approximate Depth to Groundwater: 80-100 feet  
Groundwater Gradient: Regional - southwest  
  
Attachments: Figure 1 – Site Location Map  
Figure 2 – Site Map  
SVE System Operation Summary (Attachment A)  
Laboratory Reports and Chain-of-Custody Information (Attachment B)

SVE System Operation Summary

## **SVE SYSTEM OPERATION SUMMARY – FIRST QUARTER 2005**

**ARCO FACILITY NO. 206**  
**302 WEST FIRST STREET**  
**SANTA ANA, CALIFORNIA**

### **BACKGROUND**

The soil vapor extraction (SVE) system was started on November 6, 2000. The system consists of a Baker Furnace SX-300 (serial number 196) unit operating in thermal mode connected to seven wells (VW-5, VW-6, VW-12, VW-13, VW-14, VW-15, and VW-16). Laboratory analytical results indicated that influent vapors at startup contained 1,300 parts per million by volume (ppmv) volatile fuel hydrocarbons (VFH) and the effluent vapors contained 7.2 ppmv VFH.

On May 10, 2002, Delta Environmental Consultants, Inc. (Delta) assumed responsibility for the operation and maintenance of the SVE system.

The SVE system operated during the third quarter 2002. The SVE system was down from August 2, 2002 to September 20, 2002 to repair/replace the float switch, the knockout pot, and filter. Laboratory analytical results indicated that influent vapor samples collected on June 28, July 24, and September 24, 2002 contained 120 ppmv, 20 ppmv, and 57 ppmv VFH, respectively.

The SVE system operated during the fourth quarter 2002. Laboratory analytical results indicated that influent vapor samples collected on October 31, 2002 contained 41 ppmv VFH; benzene and methyl tertiary butyl ether (MTBE) were not detected. Approximately 845 pounds (16.6 pounds per day) of hydrocarbons were removed from the subsurface this period. On November 14, 2002, the system was shut down for cycling. On January 1, 2003, the system was restarted, but needed to be shut off shortly after for blower repair.

The electric motor on the blower was repaired and on February 20, 2003, the system was restarted. Laboratory analytical results indicated that influent vapor samples collected on February 20 and March 12, 2003 contained VFH at 180 ppmv and 33 ppmv, respectively. Benzene was detected at 2.2 ppmv in the February 20, 2003 vapor sample. MTBE was not detected in samples collected February 20 or March 12, 2003. On April 30, 2003 the system was shut down for cycling.

On July 15, 2003, the system was restarted. Laboratory analytical results indicated that the influent vapor sample collected on July 15, 2003 contained 370 ppmv VFH; benzene and MTBE were not detected. The SVE system operated for 1,530 hours during the third quarter 2003. Laboratory analytical results indicated that the influent vapor samples collected on July 29, August 19, and September 17, 2003 contained VFH concentrations at 130 ppmv, 73 ppmv, and 120 ppmv; benzene and MTBE were not detected.

The SVE system operated for 1,494 hours during the fourth quarter 2003. Laboratory analytical results indicated that the influent vapor samples collected on October 22 and December 16, 2003 contained VFH concentrations at 250 ppmv and 9.2 ppmv, respectively; benzene and MTBE were not detected.

The SVE system operated for 1,079 hours during the first quarter 2004. Laboratory analytical results indicated that the influent vapor samples collected on January 22, February 6, and March 5, 2004 contained VFH concentrations at 7.6 ppmv, 120 ppmv, and 80 ppmv, respectively; benzene and MTBE were not detected. Approximately 259 pounds (5.7 pounds per day) of hydrocarbons were removed from the subsurface this period.

The SVE system operated for 1,092 hours during the second quarter 2004. Laboratory analytical results indicated that the influent vapor samples collected on April 15, May 5, and June 9, 2004 contained VFH concentrations at 100 ppmv, 91 ppmv, and 74 ppmv, respectively; benzene and MTBE were not detected. Approximately 211 pounds (4.6 pounds per operational day) of hydrocarbons were removed from the subsurface this period.

The SVE system operated for 1,142 hours during the third quarter 2004. The system operational time was approximately 60% through September 8, 2004 when it was shut down for cycling. Laboratory analytical results indicated that the influent vapor samples collected on July 10, August 19, and September 8, 2004 contained VFH concentrations at 61 ppmv, 92 ppmv, and 43 ppmv, respectively. Benzene and MTBE were not detected at or above the laboratory reporting limits of 1.6 ppmv and 1.4 ppmv, respectively.

**SVE SYSTEM OPERATION SUMMARY – FIRST QUARTER 2005**  
**ARCO FACILITY NO. 206**  
**302 WEST FIRST STREET**  
**SANTA ANA, CALIFORNIA**

The SVE system operated for 1,464 hours during the fourth quarter 2004. The system operational time was approximately 52% through January 3, 2005 when it was shut down for cycling. Laboratory analytical results indicated that the influent vapor samples collected on October 4, November 1, December 1, 2004, and January 3, 2005 contained VFH concentrations at 24 ppmv, 9.5 ppmv, less than 2.4 ppmv, and 4.7 ppmv, respectively. Benzene and MTBE were not detected at or above the laboratory reporting limits of 1.6 ppmv and 1.4 ppmv, respectively. Approximately 31.6 pounds (0.5 pounds per operational day) of hydrocarbons were removed from the subsurface in the fourth quarter 2004..

**ACTIVITIES DURING REPORTING PERIOD**

During the first quarter 2005, the SVE system continued to be cycled on a monthly basis. The SVE system operated for 652 hours during the first quarter 2005. Following one month of operation, the SVE system was turned off on January 3, 2005, and remained off for approximately one month. The SVE system was restarted on February 1, 2005. Laboratory analytical results of the influent vapor sample collected on February 1 indicated a VFH concentration of 45 ppmv, which indicated a slight rebound in concentrations when compared to the sample collected before the system was turned off on January 3, which indicated a VFH concentration of 4.7 ppmv. The SVE system operated continuously from February 1 to February 28, when the system was turned off. Laboratory analytical results of the influent vapor sample collected on February 28 indicated a VFH concentration of 5.2 ppmv; benzene and MTBE were not detected at or above the laboratory reporting limits of 1.6 ppmv and 1.4 ppmv, respectively.

The SVE system removed approximately 50.2 pounds (1.9 pounds per operational day) of hydrocarbons from the subsurface during this period. As of February 28, 2005, the SVE system has operated for 32,061 hours and has removed approximately 17,888 pounds of hydrocarbons from the subsurface. A summary of SVE system performance data is provided in Table 1, well source data in Table 2, and individual well analytical data in Table 3. A graph of VFH and benzene concentrations vs. time is presented as Graph 1 and cumulative hydrocarbons removed vs. time is presented as Graph 2.

**SCAQMD PERMIT ADHERENCE**

The SVE system operated in accordance with the SCAQMD permit requirements during this reporting period.

**PROGRESS TOWARDS CLOSURE**

Confirmation soil borings are planned to confirm the effectiveness of the SVE system in removing petroleum hydrocarbons from the subsurface. The SVE system will remain off until results of confirmation soil borings are reviewed. If the results of the confirmation soil borings indicate that petroleum hydrocarbon concentrations detected during previous assessments have been remediated, Delta will request regulatory case closure and the system will remain off until case closure is approved. If post remediation soil sample analytical data indicates that the SVE system has not been effective in removing the majority of the petroleum hydrocarbon mass from the subsurface, further SVE system operation will be evaluated.

Notes:  
 SVE = Soil vapor extraction  
 VFH = Volatile fuel hydrocarbons  
 PPMV = Parts per million by volume  
 Conc. = Concentration  
 SCFM = Standard cubic feet per minute

Deg F = Degrees Fahrenheit  
 NA = Not analyzed/available  
 LBS = Pounds  
 Temp. = Temperature  
 <1.6 = Not detected at or above stated laboratory reporting limit

Field data used in calculations except when laboratory results available until first quarter 2003. During first quarter 2003 and after, lab data only was used to calculate pounds removed.  
 When flow rate is not available previous recorded flow rate is used to calculate pounds removed.  
 AQMD permit requirement: Benzene effluent <0.691 ppmv; bold values are >0.691.

## LABORATORY REPORT

Prepared For: Delta Env. Consultants - Aliso Viejo  
27141 Aliso Creek Road, Suite 270  
Aliso Viejo, CA 92656

Attention: Aaron Baird

Project: ARCO 0206, Santa Ana

Sampled: 02/01/05  
Received: 02/01/05  
Issued: 02/09/05 16:17

NELAP #01108CA CA ELAP #1197 CSDLAC #10117

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of Del Mar Analytical and its client. This report shall not be reproduced, except in full, without written permission from Del Mar Analytical. The Chain of Custody, 1 page, is included and is an integral part of this report.*

*This entire report was reviewed and approved for release.*

### CASE NARRATIVE

SAMPLE RECEIPT: Samples were received intact, at 22°C and with chain of custody documentation.

HOLDING TIMES: All samples were analyzed within prescribed holding times and/or in accordance with the Del Mar Analytical Sample Acceptance Policy unless otherwise noted in the report.

PRESERVATION: Samples requiring preservation were verified prior to sample analysis.

QA/QC CRITERIA: All analyses met method criteria, except as noted in the report with data qualifiers.

COMMENTS: No significant observations were made.

SUBCONTRACTED: No analyses were subcontracted to an outside laboratory.

## DATA QUALIFIERS AND DEFINITIONS

- ND** Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.  
**RPD** Relative Percent Difference

## ADDITIONAL COMMENTS

**For VFH (ppmv):**

The molecular weight of 100 was used to convert Volatile Fuel Hydrocarbons from mg/m<sup>3</sup> to ppm by volume (ppmv).

**For Volatile Fuel Hydrocarbons (C6-C12):**

Volatile Fuel Hydrocarbons (C6-C12) are quantitated against a gasoline standard.

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of Del Mar Analytical and its client.*

*This report shall not be reproduced, except in full, without written permission from Del Mar Analytical.*

*This entire report was reviewed and approved for release.*

### CASE NARRATIVE

SAMPLE RECEIPT: Samples were received intact, at 22°C and with chain of custody documentation.

HOLDING TIMES: All samples were analyzed within prescribed holding times and/or in accordance with the Del Mar Analytical Sample Acceptance Policy unless otherwise noted in the report.

PRESERVATION: Samples requiring preservation were verified prior to sample analysis.

QA/QC CRITERIA: All analyses met method criteria, except as noted in the report with data qualifiers.

COMMENTS: No significant observations were made.

SUBCONTRACTED: No analyses were subcontracted to an outside laboratory.

## DATA QUALIFIERS AND DEFINITIONS

- ND** Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.  
**RPD** Relative Percent Difference

## ADDITIONAL COMMENTS

**For VFH (ppmv):**

The molecular weight of 100 was used to convert Volatile Fuel Hydrocarbons from mg/m<sup>3</sup> to ppm by volume (ppmv).

**For Volatile Fuel Hydrocarbons (C6-C12):**

Volatile Fuel Hydrocarbons (C6-C12) are quantitated against a gasoline standard.
